"TPM has always been great to work with and has helped us with our design software and printer needs"

Steve Barton
Principal
AXIOM Architecture

About AXIOM Architecture....

Axiom Architecture excels at multi-family and mixed-use design and development by combining smart design with development knowledge to create functional and enjoyable living spaces. Established in 2007, Axiom is a design-driven firm with decades of experience focusing on multi-family and mixed-used projects. Evolving from David Furman Architecture - founded in 1980, Axiom consists of a core group of people committed to design excellence and client satisfaction. Steve Barton, Matt Majors and Colleen Garrett, are managing partners within the firm. Together, they strike a unique balance of experience, design strength and business management expertise. Axiom is uniquely suited to work on a variety of projects, given their previous background as both architects and developers. Axiom has designed over 5000 units of housing in projects ranging from 2-story townhomes to 200 unit, 28-story high rise towers and these projects have spanned from high density mixed-use (including residential, retail, office and structured parking) to low density residential, stand-alone office and tenant upfit.

TPM has been Axiom Architecture's provider for Autodesk Software from the inception of our company and have always looked out for our best interests when making decisions to upgrade or change our design software and they have provided software training for our staff to help keep them up to date with the latest software release. TPM has also provided our firm with consistent support and service for our copier and large format plotter. They have been a great asset to our firm.
